

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of the claims in the application.

Listing of Claims:

1. (currently amended) A connector box (103) adapted to be at least partly embedded in a fibre-reinforced part of a wind turbine, where said connector box (103) comprises a base part (305) and at least one sealing part (304), consisting of a sealing bag, where said sealing bag seals off and protects at least one compartment (401) between the sealing bag and the base part (305) during manufacture of said fibre-reinforced part, and which sealing bag ~~can be~~ is partly ~~removed~~ removable after manufacture making said compartment (401) accessible, and where said base part (305) is adapted to fasten the connector box (103) in the fibre-reinforced part by having a larger circumference near its bottom than near its top.
2. (original) A connector box according to claim 1, wherein a first part of said compartment (604) is fixating one part of at least one element (104,105) and wherein another part of said element (104,105) is accessible from a second part of said compartment (605).
3. (currently amended) A connector box according to claim ~~[[1]]~~ 2, wherein said first part of said compartment (604) is at least partly filled with a cured material (601) thereby fixating said one part of ~~said~~ at least one element (104,105).
4. (cancelled)
5. (currently amended) A connector box according to claim ~~[[1]]~~ 2, wherein said at least one element (104, 105) comprises a current conducting part (105) and a connector part (602), wherein said current conducting part (105) is at least partly fixated in said first part of said

compartment (604), and wherein said connector part (602) is accessible from said second part of said compartment (605).

6. (currently amended) A connector box according to claim ~~[[1]]~~ 2, wherein said at least one element (104, 105) comprises an optical fibre (104) and a connector part.(602), wherein said optical fibre (104) is at least partly fixated in said first part of said compartment (604), and wherein the connector part (602) is accessible from said second part of said compartment (605).

7. (previously presented) A connector box according to claim 6, where said connector part (602) is adapted for connection of light emitting means or light receiving means (107) to the optical fibre (104).

8. (previously presented) A connector box (103) according to claim 1, made completely or partly of plastic.

9. (currently amended) A connector box according to claim ~~[[2]]~~ 1, where the at least one sealing part (304) is made of a resin-proof plastic.

10. (previously presented) A connector box according to claim 1, where the base part (305) is made of a flexible material.

11. (previously presented) A blade for a wind turbine (101) characterized by comprising a connector box (103) according to claim 1.

12. (original) A blade according to claim 11, wherein said connector box (103) is at least partly embedded in a part of a blade shell (102) so that the connector box (103) is accessible after manufacture.
